SIEMENS

Lufthansa

Chemicals containing hexavalent chromium ions are frequently used in industry.

Cr (VI) can enter the environment through many processes such as, but not limited to, cooling towers and water plants, plating operations, the tanning industry, and from paint pigments.

When the moistened Swabs come in contact with hexavalent chromium, the Swab tip turns a pink/purple color.

The intensity of the color development is directly related to hexavalent chromium content.

Each kit contains 10 Swabs and instruction.
